About VJU TMS:

It is an online project management tool that keeps your team and clients working together. The Dashboard gives a quick over-view of all your projects. It generates reports on which tasks you and your team have worked on in the past week, month, quarter or year. Automatically create a progress / gantt chart for your entire team.

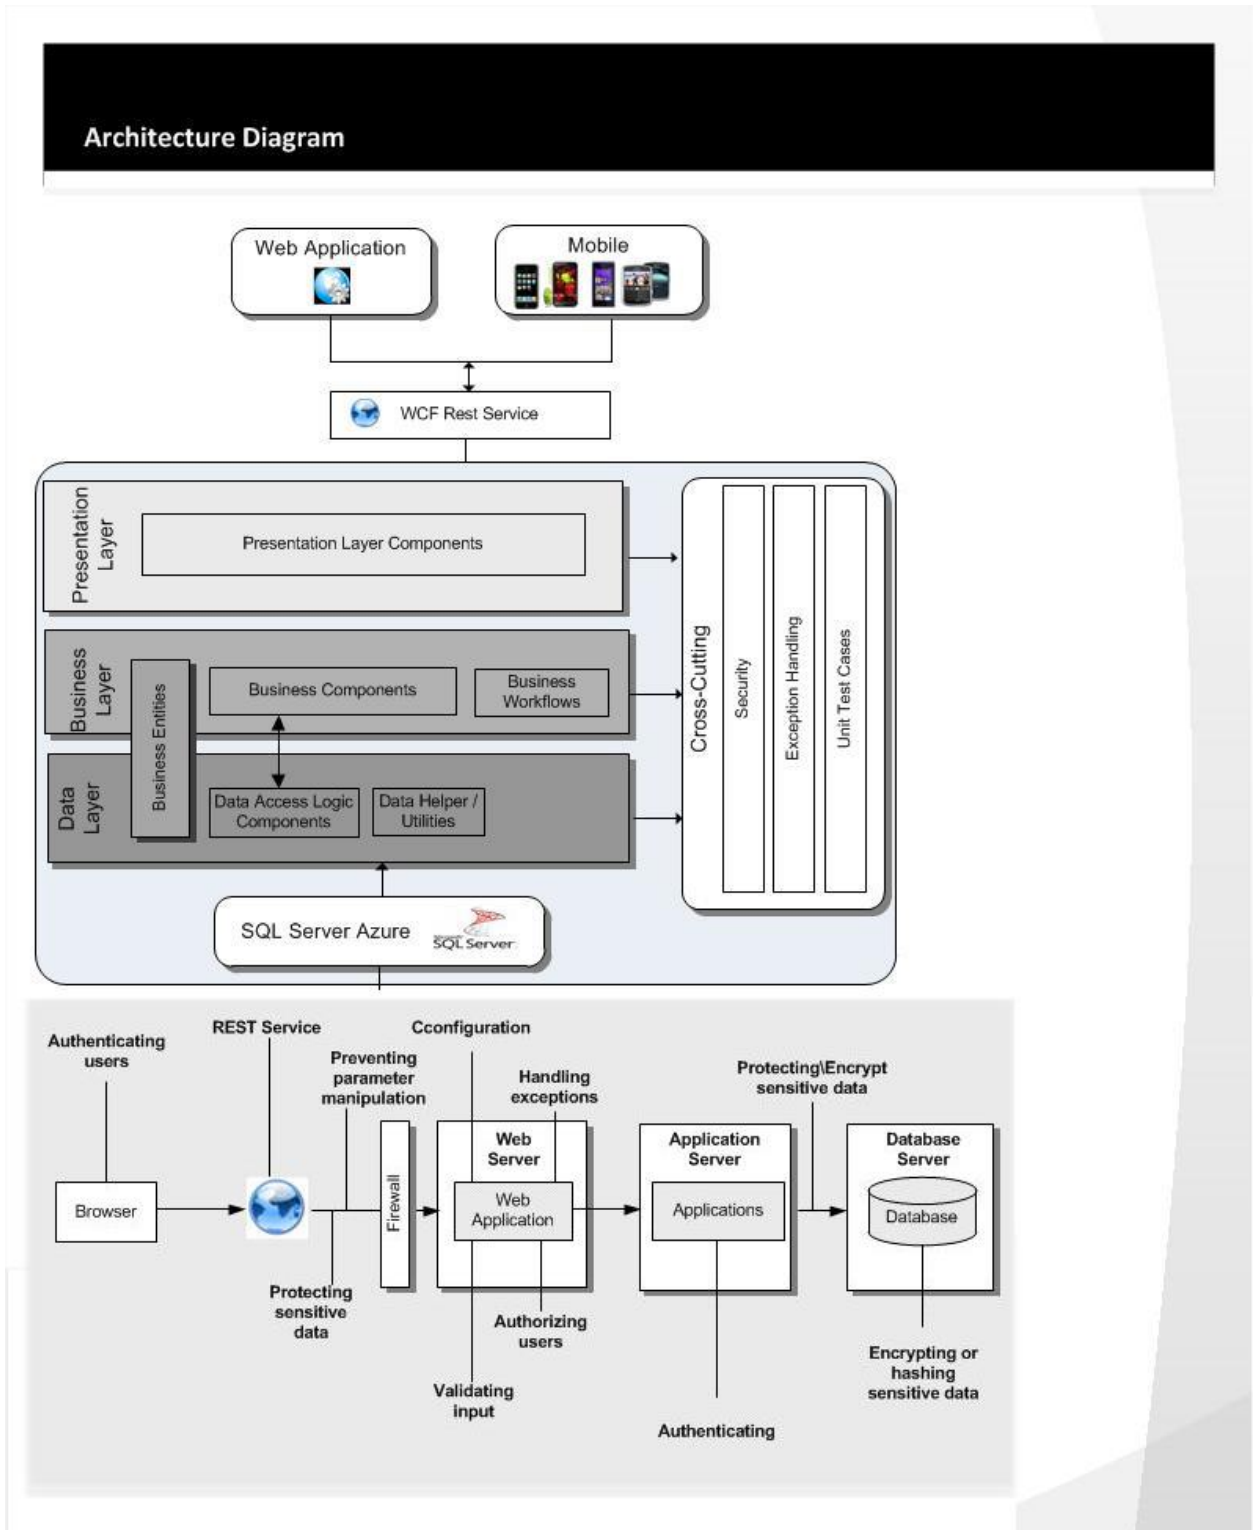

Gantt chart has outstanding features that enable you to visualize your projects, making it easy for planning and re-scheduling. It provides a configurable, web-based command center where you can manage accounting and finance tasks and processes. Utilizing a hierarchical task list, role-based workflow, and real-time dashboards, the task management product allows users to track and control a variety of task types.

System Features:

- Project Prioritization
- Collaboration
- Issue Tracking
- Workflows
